Projects

- Website 7afllaMAR

    It is party planner that makes customer to choose what party type he wants to do, and when he chooses one, he can choose what will be there like the place, cake, drakes, car type, … etc. and get total price, some information about time, date, mail, address, phone number, and payment method.

- windows form for Clinic system slamtak

    This application for two person the first one is secretary , she works to upload the information in the application like new patient , search to the old patient and take the appointments for the patient , upload the Medical analysis to the doctor , and take the vista form the patient and put it in the application to know all patient comes today .the second one is the doctor , he views the old prescription and some old notes that put it to the next time , makes the new prescription like diagnoses, medicine, and print the new prescription to the patient.

- Calculator numerical

    Numerical analysis continues this long tradition: rather than exact symbolic answers, which can only be applied to real-world measurements by translation into digits, it gives approximate solutions within specified error bounds. Then we use Web Development (Frontend) to Calculate the numerical analysis easily and faster than past.

- Lawyer information

    It is personal website for lawyer to make appointment and see of information of the lawyer like what he can do, send WhatsApp message, phone call, mail, the location of office, and work time.

- Medical appointments

    It is website for all patient to see all Doctor of all types and make appointment and see the nearest Clinic and make payment online and see some information like how many stars he takes, review.
